## DESCRIPTION

Educating the girl child leads to every educational perspective that aims to improve the skill and experience of girls. This comprises the general education at schools, colleges, professional training, vocational courses, and technical training, etc. There is a huge demand for education of girls nowadays for a number of reasons (Alhonkoski et al., 2021).

- 1 Educating girls will give them the confidence to step forward and contribute to the growth and prosperity of the nation.
- 2 A good life can be created by educating girls. She will be able to read and understand her own rights, preventing her from being mistreated due to ignorance. Her quality of life will generally improve.
- 3 Girls with education can raise awareness of the value of cleanliness and health. Due to their knowledge and education, people may live a healthy lifestyle. Even greater evidence points to educated women meeting the demands of their offspring.
- 4 Women who have completed their education are treated with respect and hold a higher social status than ignorant women. They may serve as role models for young ladies, who may find inspiration in them.
- 5 Girls who have a good education can succeed in their chosen fields. The chance for a girl child to have an education increases her chances of becoming a successful doctor, engineer, scientist, or any other profession of her choosing.

The standing of women in society has changed, and it is past time that education for girls received more attention. Most parents should strive to achieve it without regard to their children's gender. We understand the significance of girl child education in our society. Education is essential for all living beings, whether they are boys or girls.

Education helps people become smarter, learn new things, and learn about the world's facts (Divya et al., 2021).

No matter how talented and determined she is, the girl kid typically ends up on the losing end. Due to their fear of exploitation and abuse, many girls are not sent to school and are instead kept at home. Even if she is not married off, the young girl is denied a deserving education, quality healthcare, job opportunities, and equal rights that a boy enjoys. While some girls manage to 'escape' the shackles and try to build a better future, the majority accept their fate.

Many individuals are not aware of how education for girls may improve life. It is a sad situation when people from all socioeconomic groups think that spending money on a girl's education is a waste of money. Even more depressing is the fact that they would choose to rationalise spending money on their daughter's dowry or wedding expenditures over her education. Early childhood education can be crucial in advancing civilization. A girl gains power when she pursues education. She has the power to change society as a whole, improve the standard of life for her family and kids, create more work opportunities, and make decisions for her (Kim et al., 2020).

Girls' and boys' education boosts the nation's economic growth. Some countries lose billions of dollars each year as a result of education system failure. Countries that are rapidly growing have educated women working in a variety of jobs that are critical to the nation's economic growth. A well-educated woman has more opportunities for a better job and higher pay (Paul et al., 2019).

Women's education will assist the nation in increasing the labour force, which is necessary for the production of services. The greater the labour force, the greater the output. It means that the country can produce more

goods and services that are beneficial to the country's growth.

Working women will make a significant contribution to the country's Gross Domestic Product (GDP). It is an unspoken truth that when a country's women are educated, the entire economy grows by leaps and bounds (Smolentseva et al., 2020).
